Education

Howard University Washington, D.C

Bachelor of Science in Computer Science - Magna Cum Laude *Aug 2022 – May 2026*

- **Relevant Coursework**: Applied Data Structures & Algorithms, Machine Learning, Natural Language Processing, Software Development Studio, Applied Data Science, large-scale programming (Java), Web development, Cloud Computing, Cybersecurity, Artificial Intelligence, Mobile App Development(IOS)
- **Affiliations**: Brilliant Black Minds, ColorStack, National Society of Black Engineers

Experience

Undergraduate Research Assistant Washington, D.C

Speech-Based Dementia Prediction - Python, PyTorch, Machine Learning, NLP *Sept 2025 – May 2026*

- Reduced MMSE prediction RMSE by approximately (22%), from 5.2 to 4.04 by combining transformer-based text and speech models through multimodal fusion, evaluated using participant-level five-fold cross-validation.
- Developed an end-to-end multilingual machine learning pipeline across 3+ dementia datasets, 3 languages and over 650 participants, standardizing audio, transcripts and cognitive scores to train and compare text, audio and fusion models.
- Poster Work accepted for Tapia 2026 and Interspeech 2026 highlighting the significance of the approach.

Intuit Mountain View, CA

Software Engineer Intern - TypeScript, JavaScript, React, Playwright *May 2025 – Aug 2025*

- Led implementation of end-to-end automation for QuickBooks Online, selecting team-owned workflows for coverage and implementing over 40 test cases across, with scheduled morning and midday runs checking for regression.
- Identified and fixed application bugs uncovered by automated tests, supporting QuickBooks Online during the QBO Fusion beta and product launch as the platform incorporated AI capabilities and product updates.
- Inspected over 4 repositories to locate and remove 5+ team-owned feature flags during the product's beta and launch period, carrying out flag cleanup across the team's codebases.

Howard University Research Washington, D.C

Undergraduate Researcher *Jun 2024 – Dec 2024*

- Improved multilingual speech-model accuracy by optimizing audio preprocessing, text segmentation, and speaker-embedding extraction for neural text-to-speech pipelines.

Projects

Buddy's Brain (Winner of Bisonbytes AI track Hackaton) | *JavaScript, FastAPI, PostgreSQL* Feb 2025

- Developed and deployed an AI study assistant using vector search to deliver streamed answers with passage-level citations and retrieved-source fallbacks when generation fails.
- Built PostgreSQL-backed document ingestion with background processing, duplicate detection, and safe retries.

FinBuddy | *Python, React, Vercel* Jan 2025

- Developed an interactive financial literacy app, incorporating an LLM API to offer personalized financial advice.
- Simplified complex financial topics, improving financial literacy for users with diverse backgrounds.

Skills

Languages: Python, C++, TypeScript, JavaScript, Swift, Java, SQL
Developer Tools/Technologies: Git/GitHub, Figma, Xcode, Linux, Vercel, Railway, React, Firebase, Continuous Integration/Continuous Deployment(CI/CD) FastAPI, REST APIs, React Native, Playwright, PostgreSQL

Leadership

Undergraduate Teaching Assistant Aug 2025 – May 2026

- Supported 40 students in Python and Java through weekly office hours and instruction across 5 assignments, a midterm, and a final exam each semester.
